

Impact of Maternal Health on Infant Sleep Quality

A comprehensive analysis of sleep practices and their impacts

Presented by Eduardo da Silva

How Do Sleeping Methods Influence Babies' Sleep Quality and Maternal Well-Being?

Introduction

The quality of infant sleep is fundamental for healthy development and maternal well-being.

Various factors influence infant sleep, including sleep practices, maternal emotional state, and sociodemographic characteristics.

Let's explore how these elements interrelate and which practices may be more beneficial.

Objective

To investigate the relationship between infant sleep methods and sleep quality.

Highlighting how these practices affect night wakings and sleep duration.

Additionally, it was analyzed how these factors impact maternal emotional well-being.

Mother and Baby Profile

Varied educational level, predominantly higher education

Maternal and Baby Mental Health

92 %

Depression

Mothers presented symptoms of postpartum depression

33 %

Anxiety

Mothers reported moderate to high levels of anxiety.

Married mothers reported fewer night awakenings compared to single mothers.

43 %

Negative Emotions

Babies showed negative emotions (sadness, anguish, fear).

Impact on Sleep: Babies with greater negative emotionality wake up more often during the night.

Sleeping methods analyzed

Distribution of babies

Impact on Sleep: Sleep methods influence sleep quality.

Nocturnal Awakenings

How often do babies wake up (Average)

Alone in crib

0.8 times

Rocked to sleep

1.7 times

Fed to sleep

2.4 times

Impact on sleep: Sleep methods influence frequency

Recommendations

1st

Emotional Support

Offer emotional and psychological support to mothers

2nd

Social Support

Offer more support to single and less educated mothers.

3rd

Sleeping Practices

Promotion of sleeping practices that encourage baby independence.

Conclusion

Sleeping practices impact babies' sleep and, consequently, mothers' well-being.

Mental Health

The mother's mental health directly impacts the baby's sleep quality.

Sleep Methods

Adopting methods that encourage the baby's independence results in better sleep patterns and less stress for mothers.
